

Preparation instructions

Cow & Gate Nutriprem 2, Powder 800g tin

Powder

- 1** Wash hands and sterilise all utensils according to manufacturers' instructions.

- 2** Boil 1 litre of freshly run water. Leave kettle to cool for 30 mins and no longer. Measure the amount of water (refer to feeding guide) into a sterilised bottle. Be careful of scalding. Do not use artificially softened or repeatedly boiled water.

- 3** Using the scoop provided, level off the powder with a clean, dry knife. Do not press/heap the powder.

- 4** Add one scoop to every 30ml (1 fl oz) of water. Never add extra scoops or anything else to your baby's feed. Cap the bottle and shake well (for 10 seconds) to dissolve powder. Remove cap and replace with a sterilised teat.

- 5** Cool under running tap. Check temperature of feed. Feed immediately.

For hygiene reasons, do not store made up feeds. Make up each feed as required and always discard unfinished feeds within 2 hours. If necessary offer cooled boiled water between feeds. Do not heat in microwave, hot spots may occur and cause scalding.

Storage: Use powder within 4 weeks of opening and store in a cool, dry place. Do not refrigerate.
